DETAILED ACTION

1. The following is an examiner's statement of reasons for allowance:

Applicant's amendment filed on 03/21/2005 has been fully considered and they are persuasive.

Referring claim 17, the applicant argues that the amended claim 17 discloses the shaft of the first positioner is directly coupled to a boom so that the outer housing of the first positioner rotates to thereby cause the bracket fixed to the outer housing to rotate through a pan angle while the shaft of the second positioner (which is fixed to the opposite end of the bracket) is directly coupled to the camera so that the camera rotates with the shaft of the second positioner through a tilt angle. The examiner agrees that Ackles reference does not show or suggest this structure.

For claims 17-19 and 2-14, the prior art does not teach or fairly suggest apparatus for remotely tilting and panning a camera head fixed to a boom, said apparatus comprising: a first and a second pressure-actuated positioner, said shafts of said positioners being vertically and orthogonally disposed with respect to one another, means for **directly** coupling said output shaft of said first positioner to said boom so that said outer housing of said positioner and bracket rotate through a pan angle in response to rotation of said output shaft of said first positioner relative to said outer housing; and means for **directly** coupling said output of said second positioner to said camera head so that said camera head rotates through a tilt angle in response to rotation of said output shaft of said second positioner and rotates through said pan angle in response to rotation of said outer housing of said first positioner; and used in combination with all of the other limitations of claim 17.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

Conclusion

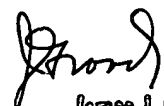

2. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.
 - a. Arbuckle et al. U.S 6,793,415 discloses a slip ring assembly for using in a rotational camera.
